I am a Backend Engineering Intern with experience in building scalable and reliable applications. I focus on writing clean, modular, and maintainable code while ensuring quality through testing and collaboration. I enjoy working in Agile environments, contributing effectively to team projects and adapting quickly to dynamic workflows. Alongside backend development, I also bring experience in frontend engineering, where I design and build user-friendly and accessible interfaces. This combination allows me to bridge the gap between user-facing applications and backend systems, bringing a well-rounded perspective to projects.

EXPERIENCE

PRO ONE, Tehran,Iran— *Software Engineer / Full Stack*

electronic consumer company

DEC 2023 - PRESENT

Developing a modular software suite for **PRO-ONE** to automate importing, manufacturing, sales, warranty, crm, and reporting across 3 international offices. Contributed to **frontend architecture, product design, and business flows**, while also working on **backend features** like authentication, dashboards, and core APIs using modern ORMs, testing, and deployment practices.

- **Led frontend architecture** with scalable UI using React.js in a **monorepo**
  Designed intuitive product flows with Tailwind CSS
- **Implemented backend features**: RBAC, MFA, 3rd-party services, etc
  Integrated PostgreSQL with Drizzle ORM,
- **Applied testing practices** using Vitest and Jest
  Streamlined deployments with Docker & GitHub Actions

OPAL SHOPPING CENTER, Tehran,Iran— *Software Engineer / Front-end*

SEP 2021 - PRESENT

Led the frontend development of a comprehensive suite of digital services for Opal Shopping Center, driving innovation and enhancing customer experience with modern web technologies.

- **Hands-Free Home Delivery:** Developed a responsive, user-friendly interface using **React.js** to facilitate seamless order placement and real-time tracking. Utilized **Axios** for API communication and **TanStack Query** for efficient data fetching and caching, ensuring smooth user interactions.

SKILLS

Backend
——————————
Javascript
typescript
express.js
Mongodb
Mongoose
Postgresql
Drizzle
CI/CD
Prisma
Node.js
ZOD

vcs-deployment
——————————

frontend
——————————
React.js
Next.js
Vue.js
Nuxt.js

others
——————————
Python
MUI
Tailwind CSS
Redux JS
Zustand
StyledComponents
Module CSS
StyledComponents
Formik
YUP
React Hook Form

- **Valet Service Management:** Built an intuitive dashboard with **TypeScript**, enabling efficient valet booking and management. Implemented complex state logic with **Redux Toolkit** to handle real-time updates and user notifications.
- **CRM Management app:** Architected a modular CRM system frontend using **React**, **Zustand** for lightweight state management, and **CSS Modules** for scoped styling. Integrated with backend APIs securely via **Axios** and enhanced UX with **Framer Motion** animations.
- **Event Management Platform:** Created an interactive event listing and booking system featuring calendar integration and ticket sales. Leveraged **Next.js** for SSR, optimized SEO, and **React Hook Form** for robust user input validation.
- **Promotional Features:** Developed engaging interactive features such as **lotteries**, **scratch cards**, and **QR code generators** using **Canvas API** and **Three.js** for dynamic visuals and animations. Used **Framer Motion** to animate user interactions and feedback smoothly.
- **Multilingual Support & Accessibility:** Implemented internationalization using **i18next**, enabling multilingual content that serves Opal's diverse customer base.
- **Monorepo Architecture:** Maintained all services in a **monorepo** using **Turborepo**, promoting code reuse and consistency through a shared **design system**, **API client package**, and multiple web apps.

All frontend code is built with modular and **reusable components**, ensuring maintainability, scalability, and a consistent user experience across all services.

Azad University, Tehran, Iran— *Master*

2020

Azad University, Tehran, Iran— *Bachelor*

2016- 2020

PROJECTS

IAMDb — *Movie Search Website*

A Vue.js app to search movies and display IMDb details like ratings, genres, and more. Features include favorites, genre filtering, lazy-loading, and BlurHash for smooth image loading. Built with Vue 3, TypeScript, and Vue Router.

Etalon — *Pure HTML/CSS advance project with functionality*

- Responsive Design: Ensures optimal viewing experience across a wide range of devices.
- Carousel: Displays featured products in a visually appealing slideshow format.
- Offering Cards: Presents multiple product offerings with clear, structured layouts.
- Best Selling Items: Highlights top-selling products with attractive cards.
- Viewport-Specific Loading Solutions: Provides optimized loading and display for different screen sizes.
- Sales Countdown: Includes a countdown timer to create urgency and promote sales.

Flight engineers — *e-Commerce business*

A React.js app to search for references on Flights which are dedicated professionally in the aviation industry.

Management Solution — *private shopping mall customer management - 2022 V1 / 2023 V2 / 2024 V4*

- **User and Role Management:** Implemented a comprehensive system for managing users and roles with secure **authorization and authentication** processes, ensuring appropriate access levels across the platform.
- **Bill Validation Algorithms:** Designed and developed sophisticated algorithms for validating shopping bills, ensuring accuracy and preventing fraud.
- **In-App Notifications:** Integrated a real-time notification system to keep users informed about their points, upcoming events, and other relevant updates.
- **Data Analysis with Charts and Graphs:** Utilized **React** and **JavaScript** libraries to create interactive charts and graphs for data analysis, providing insights into user behavior, sales trends, and more.
- **Store Authorization and Management:** Built a management interface for stores to authenticate and manage their participation, including tracking sales and user engagement.
- **Surveys:** Developed customizable surveys to gather user feedback

and insights, contributing to the overall improvement of the festival experience.
- **Daily and Final Lotteries:** Implemented daily and final lottery systems, where users can participate based on their accumulated points, adding excitement and engagement to the festival.
- **Employee Performance and KPI Analyzer:** Designed algorithms and statistical tools to analyze employee performance and key performance indicators (KPIs), helping in making data-driven decisions and improving overall efficiency.

HandsFree Shopping Management System — *private shopping mall service management*

- **Inventory Management:** Implemented a real-time inventory tracking system using **React and TypeScript**, ensuring accurate stock levels and automatic updates.
- **Shopping Bags Collector:** Developed a hands-free shopping collector feature utilizing **JavaScript and ReduxJS**, enabling customers to easily deliver their shopping bags to customer points.
- **Customer Validation and Verification:** Integrated a secure customer validation and verification system using **NextJS and Jest**, ensuring that only authenticated users can access the service.
- **Delivery System:** Built a seamless delivery system that coordinates with inventory and order management, leveraging **VueJS and TailwindCSS** to provide real-time delivery tracking and notifications.
- **User Interface:** Designed a user-friendly interface with **HTML5, CSS3, Bootstrap, and MUI**, ensuring an intuitive shopping experience across devices.
- **Testing and Quality Assurance:** Ensured robust functionality and reliability through comprehensive testing using **ChaiJS** and **Jest**.
- Built a personalized dashboard where customers can manage their delivery requests, track orders, and view purchase history, enhancing user control and satisfaction.

Valet Management — *private shopping mall customer management solution*

- Vehicle Check-In/Check-Out: Implemented a streamlined process for vehicle check-in and check-out using React and JavaScript, enabling quick and efficient service.
- Parking Spot Management: Developed a real-time parking spot allocation and tracking system, optimizing the use of available space and reducing wait times
- .Customer Dashboard: Created a personalized customer dashboard where users can request their vehicles, view service history, and manage additional service requests.
- Service Request Management: Integrated additional service management, allowing customers to request services like car

washing or maintenance, and track the status of these requests

- .In-App Notifications: Provided real-time notifications to customers and staff about vehicle status, service updates, and special offers, enhancing communication and service delivery.
- Employee Performance Tracking: Designed algorithms to monitor and analyze employee performance, helping managers make data-driven decisions and improve service quality.
- Security and Authorization: Implemented robust authorization and authentication mechanisms to ensure secure access to the system for both customers and employees.
- Data Analysis and Reporting: Utilized data visualization tools to generate reports and analytics, providing insights into parking trends, service utilization, and operational efficiency.
